Art Unit: 1711

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims ~~1-12~~ and 27-35, drawn to polymer composite, classified in class 524, subclass 35. 

II. Claims 13-26, drawn to a process, classified in class 524, subclass 908.

The inventions are distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different factions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

2. During a telephone conversation with Attorney Louis F. Wagner on September 22, 2004 a provisional election was made with traverse to prosecute the invention of II, claim 13-26. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-12 & 27-35 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 14-19 and 21-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 is indefinite. It encompasses a process of claim 11; but claim 11 is not directed to a process. It is directed to a composite.

Similar is the case with claims 15-19 and 21-26.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

Art Unit: 1711

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 13 & 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goto et al (US 6274248) in view of Meyer et al (US 4467077).

Goto describes a thermoplastic composite composition reinforced with mice and wooden fiber filler (abstract). Composite is prepared by extrusion or injection molding (col. 5, lines 53-57).

Goto does not mention use of chlorinated resin.

Meyer describes mica filled polymer resin composites. Special additives are incorporated (abstract). One such additive is chlorinated paraffin (chlorez 700) (col. 8, lines 2-5).

It would have been obvious to include chlorinated paraffin of Meyer in the composition pf Goto in order to ensure greater uniformity in blending and resultant increase in mechanical properties.
